Kennedy's Greenturf Lawn Grass Seed

This photograph is a view of part of the lawn on the estate of one of our Long Island customers.
Sown with Kennedy's Greenturf Lawn Grass Seed Mixture.

Kennedy Kwality Lawn Grass Seed

How to Make a Lawn

The ground should be thoroughly prepared; that is, the soil should be fertilized, then turned over to a depth of 6 inches and pulverized. Sow good seed (which is very essential) roll the ground and cross roll in order to press the seed firmly into the soil. The proper time to sow grass seed depends upon the latitude. In the central and eastern states seed may be sown from March 1st to the end of June. Seed may be sown in the Fall, from the first part of August to the end of October. Sow, if possible, when ground is moist. For seeding a new lawn use 150 to 200 lbs. per acre.

KENNEDY'S GREENTURF LAWN GRASS SEED MIXTURE

‡(Formerly Kennedy's Green Velvet)

This is the lawn grass seed mixture which for over 30 years has seeded many of the most beautiful lawns in America under the name of Kennedy's Green Velvet Lawn Grass Seed Mixture. Recently worthless mixtures bearing the trade name "Green Velvet" have been marketed to the confusion of our patrons. To avoid this confusion we have changed the name to **Kennedy's Greenturf Lawn Grass Seed Mixture**. The seed in this mixture is all reclaimed and especially adapted to withstand the heat and drought of the Summer. When properly sown and cared for **Greenturf** will produce a beautiful green lawn the entire season.

Lb. 89c., 5 lbs. \$3.75, bu. \$14.50, 100 lbs. \$70.00

**KENNEDY'S BENTURF LAWN GRASS SEED MIXTURE***(Reg. U. S. Pat. Off.)***(Bent Formula)**

The popularity of golf in recent years has made comparison of lawns and putting greens an easy matter. One hardly expects his lawn to look as perfect as a putting green, but this is possible if sown with Kennedy's Benturf Lawn Grass Seed Mixture. With reasonable preparation and care excellent results have been accomplished with our Kennedy's Benturf Lawn Grass Seed Mixture which contains a large amount of Bent seed. This makes a compact, rapid growth forming a close sward withstanding wear and tear.

Lb. \$1.50, 5 lbs. \$7.00, 25 lbs. \$32.50, 100 lbs. \$125.00

It has been tried in a great many sections of the country and has given excellent results where a quick cover was desired and has proven particularly adaptable for sowing on old lawns which have become shoddy and in need of renovating.

LAWN CLOVER — DWARF WHITE

The only variety suitable for lawns. Very dwarf and of a spreading habit. We advise sowing White Clover separately on account of the seed being much heavier than that of the finer grass seed. It has a tendency to work to the bottom of the receptacle it is being sown from and consequently the last part of the brass seed sown has greater percentage of Clover than the first. Lb. \$1.75

Kennedy's Shadeturf Lawn Grass Seed ➔

The above is another view of the lawn on the estate of one of our Long Island customers. Sown with Kennedy's Shadeturf Lawn Grass Seed Mixture.

Kennedy's Pasture Mixtures

FOR PERMANENT PASTURE AND HAY CROPS

Our Permanent Pasture Grass Seed Mixtures contain only grasses most suitable for this purpose. The result of sowing Kennedy's Permanent Pasture Mixture is a successive growth of rich, succulent grasses from early Spring until late Fall.

We recommend, in good soil, sowing 80 lbs. per acre or in poor soil 100 lbs. per acre. We also suggest sowing an additional 10 lbs. of Red Clover, in either case, to the acre.

Permanent Pasture Grass seed may be sown either Spring or Fall but we advise sowing Clover in the Spring only.

When ordering state whether your soil is sand, clay, moist or dry, so that the proper proportions of the various grasses may be used.

**KENNEDY'S LONG-STEMMED
IMPERIAL GIANTS**

The Pansy has been a garden favorite since the middle of the 17th century. In recent years, hybridizers have developed the size of flower and length of stem to such an extent as to make descriptions inadequate. To convey a true picture of the infinite perfection of form, range of color, texture of petals, and length of stem, produced by our mixture of Long-Stemmed Imperial Giants is impossible.

Several years ago we offered Kennedy's Long-Stemmed Imperial Giants in mixture only. With their free-flowering habit and wide range of sombrous shades of soft velvet, we do not hesitate to proclaim Kennedy's Long-Stemmed Imperial Giants the finest Pansies in cultivation today.

We now offer this same strain in fixed named varieties, in addition to the mixture. Because the best flowers are shy seeders, the price of a good strain is necessarily high.

Imperial Giants Blue Moon. This flower form Scabiosa is as different from the existent Scabiosa varieties as *Nasturtium Golden Gleam* is from the old singles. Instead of a few rows of broad petals surrounded by a flat pincushion-like top of small petals, flowers composed entirely of broad, heavy, waxy petals, eliminating the pincushion center entirely. Flowers fully double, $2\frac{3}{4}$ in. across and $2\frac{3}{4}$ in. deep. Rich deep lavender-blue; upright, growing 48 in. high with long, heavy, wiry stems holding flowers erect. An ideal cutting variety.

EXHIBITION DAHLIAS—Continued

POMPON or BOUQUET DAHLIAS

From year to year we have added new varieties to our list of Pompoms until there is considerable duplication which only results in confusion when a selection of Poms is to be made.

Recent introductions have the following to recommend them over their predecessors:

A longer, wiry stem, sometimes reaching 24 inches. All the newer varieties are characterized by a reduction in the size of flower and a perfection of form and placement of petals. Lastly, the colors are truer and more distinct.

Kennedy Kwality Exhibition Gladiolus

Our Glads Are Free from Thrip!

Due, no doubt, to scientific treatment of planting stock for years our Gladioli have always been free from thrip. As an added precaution and to be sure that bulbs supplied by us are absolutely free from this pest, we will also scientifically treat our bulbs again before shipment is made to our customers.

Inasmuch as thrip lives in the soil, as well as on the bulbs in storage, through the Winter, it is imperative that our bulbs be planted on soil where Gladioli were not grown last year and not close to other Gladioli from other sources.

We guarantee our bulbs to be the largest size and well matured, which is absolutely essential for producing exhibition flowers.

Kennedy Quality Hardy Everblooming Roses

EXTRA HEAVY 2-YEAR-OLD BUDDED NURSERY-GROWN STOCK

The Roses offered in this list are of the Hybrid Tea class, which are commonly known as Everblooming Roses, and are without exception the most desirable for bedding. The stock we offer are extra heavy, two-year-old, budded, nursery grown, which, if planted in the early Spring, are guaranteed to bloom from June until frost, and are not to be confused with the stock which has been forced in greenhouses all Winter and after being discarded by growers because of weakened condition due to hard forcing, is offered for sale as flowering stock by unscrupulous dealers.

Budded plants are more vigorous, produce more and better flowers, and are more hardy and less susceptible to disease.

These plants can be supplied in dormant stock, on orders placed with us before March 15th, for delivery up to April 15th. From our experience in the past with Roses, dormant stock should be planted before April 15th. After this date we offer all the varieties listed below in 6-inch pots.

Kennedy Kwality Fruit Trees

Our stock is all heavy grade with good root system and free of disease

Largely as a result of experiments and breeding by the New York State Department of Agriculture in co-operation with the New York State Fruit Testing Co-operative Association, most fruits have been greatly improved in size, color, texture and flavor. This was accomplished by breeding greater immunity to certain diseases, as for example peach mildew, apple scab, etc.

Nurserymen now have available for sale new varieties, which so far surpass the standard varieties that we believe some of the old favorites should be discarded. We earnestly urge our customers to consult our list when you are contemplating replacements or renewals in your orchards and vineyards.
